

THE UNIVERSITY OF QUEENSLAND  
AUSTRALIA

The effects of environment on the feral horse foot.

Brian Anthony Hampson

*A thesis submitted for the degree of Doctor of Philosophy at*

*The University of Queensland in May, 2011*

*School of Veterinary Science*

**Table of contents: 249 pages**

- Chapter 1: Introduction
- Chapter 2: Genetic analysis of Australian feral horses and assessment of band structure by DNA analysis
- Chapter 3: Monitoring distances travelled by horses using GPS tracking collars
- Chapter 4: Distances travelled by feral horses in 'outback' Australia
- Chapter 5: Nutritional analysis of gastric contents and body condition score at a single time point in different herds of Australian feral horses
- Chapter 6: Large range of morphometric variables and high incidence of pathology in the feet of Kaimanawa feral horses
- Chapter 7: Chronic laminitis in the Kaimanawa feral horses of New Zealand

Chapter 8: The effect of the environment on the feral horse foot

Chapter 9: Brumby foot swap: hoof wall growth and changing morphology-  
2 case studies

Chapter 10: Radiographic, gross visual and histopathological parameters of foot  
health in 100 Australian feral horses

Chapter 11: Environment does not affect hoof wall relative hydration

Chapter 12: Hoof wall depth and primary epidermal lamellar density distribution in  
the hooves of Australian feral horses

Chapter 13: Variation in the primary epidermal lamellar density between  
Australian feral and domestic horse fetal hooves

Chapter 14: Sole depth and palmar surface weight bearing characteristics of the  
Equine foot

Chapter 15: Health and behaviour consequences of feral horse relocation

Chapter 16: General discussion

Bibliography
